In other words, a computer is either a server or a client, and not both. A server can't become a client, nor can a client become a server. Other networks are more progressive, allowing any computer in the network to be a server and allowing any computer to be both server and client at the same time. The best way to understand what client/server computing is all about is to look at the extremes of what can be called dumb computing-- computer applications in which either the client or the server plays dumb, unable to do any share of the work. Dumb computing was the norm for most mainframe/PC computing systems before client/server computing. I thought the book was excellent at filling in gaps in my understanding of client server computing. It listed hot products from top vendors, explained real-world uses for the products, and offered suggestions on how to approach the client/server decisionmaking process, all in an easy to understand debbieshideshow.com: 7.
